Chapter 1

Introduction

Chapter 2

Infrastructure as a Service

2.1 Benefits

2.2 IaaS applications

2.3 Requirements

Chapter 3

Virtualization

3.1 Operating system-level virtualization

3.2 Virtualization of networking resources

Chapter 4

Virtual infrastructure construction and deployment

4.1 Possible approaches

4.2 Heterogeneous environment

4.3 Homogeneous environment

4.3.1 Single node

4.3.2 Multi-node

4.4 Problems

4.4.1 Quality of Service

4.4.2 Load balancing / Deployment

4.4.3 Isolation

4.4.4 Broadcast domain preservation

Chapter 5

Existing virtualization solutions

Chapter 6

Solaris OS as a resource virtualization environment

6.1 General information

6.2 Solaris Containers

6.3 Crossbow

Chapter 7

Component-based software design

Chapter 8

The system overview

8.1 The JMX-based Infrastructure Monitoring System

8.1.1 Enabling rich functionality thanks to JIMS integration

8.2 Architecture

8.2.1 Main components and their responsibility

8.2.2 Low-level function access with layer-based design

Benefits

Chapter 9

Case Study

Chapter 10
